

ACQUA CLICK PLASTIC

The Acqua Click rain sensor functions as a switch which automatically stops irrigation when a rainfall event of a certain level occurs. The mechanism that enables this operation is based on hygroscopic discs that swell on absorbing rainwater and shrink once it has evaporated.

Technical Features

- Models available: Plastic support, metal support, jack input
- Usually closed sensor
- Precipitation adjustment: 3 mm, 6 mm, 9 mm, 18 mm
- Connection cable length: 7.5 m
- Hygroscopic discs for rain absorption
- 2-wire connection
- Usually closed sensor
